

Property content that answers questions

A shared brief for the team and the property owner. Its job is to prepare a clean shoot, capture the useful details and deliver files that work in the intended channels.

01 / BEFORE THE SHOOT

Prepare the property and brief

A production day works best when the client confirms access, styling and the delivery purpose before arrival.

- | | | |
|----|---------------------------|---|
| 01 | Access and timing | Confirm address, parking, contact person, access time, keys or entry code, and whether occupants, guests or staff will be present. |
| 02 | Property readiness | Clean visible surfaces, remove personal paperwork and bins, open blinds where appropriate, switch on practical lights, and decide which rooms or exterior areas are in scope. |
| 03 | Brief | Confirm target buyer or guest, property strengths to show, required formats, platform, deadlines and any mandatory details such as view, parking, terrace or renovation. |
| 04 | Permissions | Confirm permission to photograph the premises and any people visible on site. Identify areas, artworks or neighbouring properties that must not be shown. |

02 / CAPTURE LIST

Show the property in a useful order

The final selection should allow a viewer to understand arrival, layout, light, key rooms and the strongest differentiators.

01 Arrival

Exterior context, entrance, building or site approach.

02 Overview

Wide establishing images of main rooms and the primary exterior area.

03 Flow

Views that connect adjacent spaces and clarify circulation.

04 Details

Material finishes, kitchen, bathroom, storage, view, terrace, parking or amenities that materially affect a decision.

05 Vertical video

A short sequence with a clear route: approach, principal room, best feature, close. Capture separate vertical framing when social delivery is required.

03 / EDIT, DELIVER, ARCHIVE

Keep handover unambiguous

Edit for accurate representation. Correct exposure, white balance and perspective without changing material property features or misrepresenting scale.

FILE NAMES

YYYY-MM-DD_property-locality_deliverable_version.ext. Example: 2026-08-06_vila-cluj-napoca_hero-photo_v01.jpg.

PHOTOGRAPHY

Deliver web-ready JPEGs at the agreed dimensions. Retain the edited high-resolution master where the contract requires it.

VIDEO

Deliver the agreed aspect ratios separately. Include captions or on-screen copy only after the factual text is approved.

REVIEW

Send a single review link or folder, identify the version and deadline, and collect comments in one consolidated response.

ARCHIVE

Store final approved files and the project brief together. Keep source footage, licences and client approvals according to the agreed retention policy.
